CuVerro[®] Antimicrobial Copper

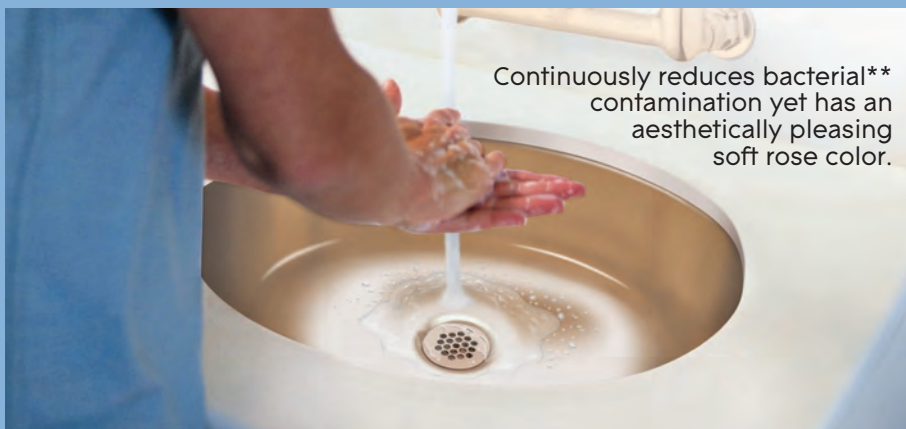

Discover the
professional's choice.[™]

- Registered EPA Health Claim* – kills more than 99.9% of bacteria** within 2 hours
- Supplements routine cleaning and sanitizing
- Aesthetically pleasing soft rose color

CuVerro® Antimicrobial Copper

Continuously reduces bacterial** contamination yet has an aesthetically pleasing soft rose color.

Highest quality sink formed of #18 (1.2mm) gauge, CuVerro antimicrobial copper. Exposed surfaces are hand blended to a lustrous highlighted satin finish. Fully undercoated to dampen sound and prevent condensation. **Drain sold separately.**

Each year in the United States, hospital acquired infections:

- Infect 2+ million people
- Cause nearly 100,000 deaths
- Cost the healthcare industry \$45 billion¹

Features

- **Antimicrobial Efficacy**
 - ◆ Registered EPA Health Claim*
 - ◆ Kills more than 99.9% of bacteria** within 2 hours
 - ◆ Continuously reduces bacterial** contamination
- **Sustainability Features**
 - ◆ Greater than 80% recycled content
 - ◆ 100% Recyclable
 - ◆ No VOC's or off-gassing
- **Attractive soft rose color**
 - ◆ Strong and durable surface
 - ◆ Tarnish resistant finish
- **Available antimicrobial copper drain and overflow**

¹ Division of Healthcare Quality Promotion National Center for Preparedness, Detection, and Control of Infectious Diseases Coordinating Center for Infectious Diseases. Scott II R.D. (2009). The direct medical costs of healthcare-associated infections in U.S. hospitals and the benefits of prevention.

* The use of CuVerro antimicrobial copper surfaces is a supplement to and not a substitute for standard infection control practices; users must continue to follow all current infection control practices, including those practices related to cleaning and disinfection of environmental surfaces. CuVerro antimicrobial copper has been shown to reduce microbial contamination, but it does not necessarily prevent cross-contamination.

** Testing demonstrates effective antibacterial activity against Methicillin-Resistant Staphylococcus aureus, Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, and E. coli O157:H7.
