

Power of Product Transparency & Sustainability:

Understanding How To Use It for Optimal Green Build and Design

Program #: ELK9100

Credits: 1 AIA LU/HSW, 1 ASPE CEU/PDH*, .1 IDCEC/ASID LU, .1 NKBA LU

HSW: Yes

Description:

Material transparency is a growing initiative in the green and healthy building arena. The course reviews legislation that provides the baseline for healthy and sustainable materials, as well as discusses the limitations of those regulations. This course further explores the predominant green building programs and how material transparency can help achieve certification status from those programs. Attendees will leave this course with an understanding of how to access, analyze and apply material transparency to their projects and to leverage these initiatives to support a healthier, more sustainable building industry.

Learning Objectives:

1. Understand product transparency initiatives that benefit the building segment
2. Review legislation surrounding chemical use
3. Examine green building programs
4. Assess material transparency labels
5. Encourage the use of material transparency in building projects

**This course is approved for PDH credit but is subject to compliance with each states rules and guidelines.*
